

XM is the best thing to happen to Radio in a very long time, being able to get the weather and traffic when I need it and nationwide is very important to me because I travel quite a bit, dont let the NAB lobbies pass petition 04-160 it is simply a means for them to not improve their own systems. Technology like XM is a good thing and instead of trying to get rid of aspects of the the competition should step up to the plate and make something just as good or better.
